# Bolt Length Calculations in Plant 3D 2013 

## Bolt length calculations are new to AutoCAD Plant 3D 2013. This white paper describes their implementation.

## Bolt Length Calculations in Plant 3D 2013

Bolt length calculations are new to AutoCAD Plant 3D 2013. Instead of having to define multiple bolt sets in a spec, a single set can now be defined together with a table of standard lengths. The FlangeThickness values defined for a flange and the bolt set are then used to determine the correct bolt length for a given flange joint.

- If both values are equal, or one is not set, and it's not a wafer component the bolt length defined inside the bolt set is used.
- If the values are different, the bolt set FlangeThickness is subtracted from the bolt set bolt length and the flange FlangeThickness is added. The next possible 'standard' bolt length is then selected. If no standard length is available, the bolt length is rounded up to the next 10 mm .

This facilitates correct bolt set selection where flanges of different sheet thickness are connected which have the same PressureClass, NominalDiameter and Facing.

As an example, looking at the $10 \mathrm{HSO1} \mathrm{spec}$, it can be seen that the DN50 flange has a defined FlangeThickness of 18 mm .

## $\pi$ White Paper

## Passion Integrity Expertise Teamwork

Looking at the bolt set definition in the same spec, it can be seen that for a DN50 nominal diameter the defined bolt length of $\mathbf{8 7 m m}$ is for a given FlangeThickness of $\mathbf{2 0 m m}$.

| is Lug Set | Length | Stud Type | Stud | Bolt | Port | Nominal | Nomina | Matching | End | Flange Std | Gasket | Facing | Flange Thickness | Pr |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| - | 54 | Stud Bolt | Lg, | DIN 976 | S1 | 6 | mm |  |  | DIN 2501 |  | C | 12 | 10 |

| $\square$ | 69 | Stud Bolt | Lg, | DIN 976 | S1 | 10 | mm |  |  | DIN 2501 |  | C | 16 | 10 |
| - | 69 | Stud Bolt | Lg, | DIN 976 | S1 | 15 | mm |  |  | DIN 2501 |  | C | 16 | 10 |
| - | 73 | Stud Bolt | Lg, | DIN 976 | S1 | 20 | mm |  |  | DIN 2501 |  | C | 18 | 10 |
| - | 73 | Stud Bolt | Lg, | DIN 976 | S1 | 25 | mm |  |  | DIN 2501 |  | C | 18 | 10 |
| - | 83 | Stud Bolt | Lg, | DIN 976 | S1 | 32 | mm |  |  | DIN 2501 |  | C | 18 | 10 |
| - | 83 | Stud Bolt | Lg, | DIN 976 | S1 | $10-$ | mm |  |  | DIN 2501 |  | C | 18 | 10 |
| 1 | 87 | Stud Bolt | Lg, | DIN 976 | S1 | 50 | mm |  |  | DIN 2501 |  | C | 20 | 10 |
| - | 91 | Stud Bolt | Lg, | DIN 976 | S1 | 65 | mm |  |  | DIN 2501 |  | C | 22 | 10 |
| - | 95 | Stud Bolt | Lg, | DIN 976 | S1 | 80 | mm |  |  | DIN 2501 |  | C | 24 | 10 |
| - | 95 | Stud Bolt | Lg, | DIN 976 | S1 | 100 | mm |  |  | DIN 2501 |  | C | 24 | 10 |
| - | 99 | Stud Bolt | Lg, | DIN 976 | S1 | 125 | mm |  |  | DIN 2501 |  | C | 26 | 10 |
| - | 112 | Stud Bolt | Lg, | DIN 976 | S1 | 150 | mm |  |  | DIN 2501 |  | C | 28 | 10 |
| - | 104 | Stud Bolt | La. | DIN 976 | S1 | 200 | mm |  |  | DIN 2501 |  | C | 24 | 10 |

As the bolt set FlangeThickness and the flange FlangeThickness are different a calculation is required.
Assuming both flanges are equal, the bolt length is calculated to be:
$87.0-20.0-20.0+18.0+18.0=83.0$

## $\pi$ White Paper

Looking at the bolt standard, the next possible 'standard' bolt length is $\mathbf{8 5 m m}$.

Similarly, for

- DN100 -> 95.0-24.0-24.0 + 20.0 + 20.0 = 87.0 -> next 'standard' bolt length is 90.0
- DN125 -> 99.0-26.0-26.0 + 22.0 + 22.0 = 91.0 -> next 'standard' bolt length is $\mathbf{9 5 . 0}$
- DN150 -> 112.0-28.0 - 28.0 + 22.0 + 22.0 = 100.0 $->$ next 'standard' bolt length is $\mathbf{1 0 0 . 0}$
