

Transmittal Documents

All Electrical Designer Users

As customers demand even more documentation, one document that is becoming ever increasingly popular is the document transmittal note (DTN) or design change note (DCN). Typically this document is provided with a set of the project drawings or selected project drawings. Electrical Designer can produce these automatically.

When filling in details about each drawing in the drawing record card, ensure that you fill in detail about the Revisions.

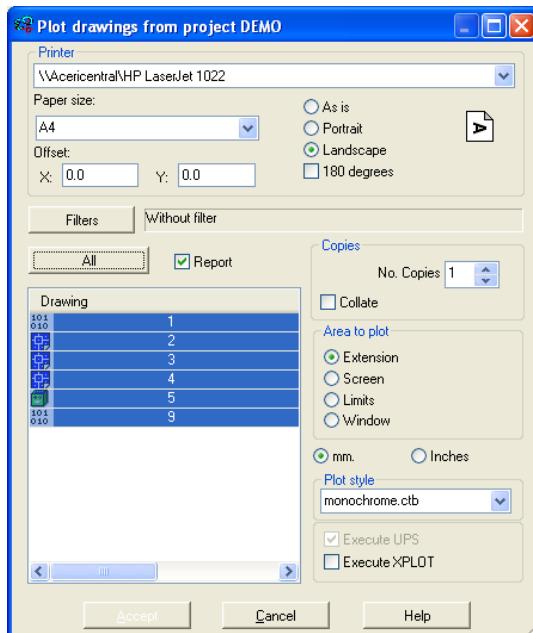

The transmittal document is intended for use when you have printed a selection of drawings off and **will not work** if you haven't done this action.

From the Drawings Browser

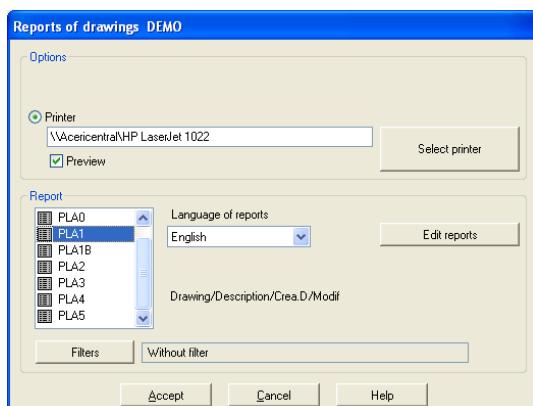

Select  Plot Drawings.

The following dialogue will be displayed:

- Select the printer you wish to print to.
- Select the paper size e.g. A4
- Select the orientation
- Left click on each drawing you wish to print (Use *Ctrl* and *Shift* to select multiples) **OR** select *All* to select all drawings
- Select the plot style (*monochrome.ctb* or *stb* is recommended)
- Select *Execute XPLOT* if you have setup plot layers. Please refer to Tips & Tricks December 2006 <http://www.aceri.co.uk/default.aspx?cid=139>
- Ensure the *Report* tick box is selected
- Select *Accept*

At the end of the print process, the Report of Drawings dialogue will be shown:

Change the Language of Reports to Misc

Choose the TRANSMIT2 report in this example.
