Quick Display Tip 12 – View Cube and Navigation Bar

The default start settings show both the View Cube and the Navigation or Navbar. The Navbar can simply be closed by left clicking the little cross in the top right of the Navbar, and restored by either typing in “navbar” at the command line followed by typing in the option “on”, or left clicking on the dash in the top left hand corner of the drawing area. From the displayed menu the visibility of the view cube may also be controlled.

The visibility of the view cube may also be controlled from the 3D Modelling Tab of the options dialogue box.
