

Working with data

Viewing Tables

When you switch a layer on, if you have permission to view the table behind that data a bar will appear on the right hand side. If you click the arrow the table will pop out.

Tables are configured by the administrator and columns can be added on request.

The drop down on the top right can be used to select the data from the layers open in the interface.

Typing a value in the filter box allows you to search for records containing that value as in the 'hist' example below.

The  button will export your results to excel if you have export permissions assigned to your role.
