

Schematic Terminal Annotation

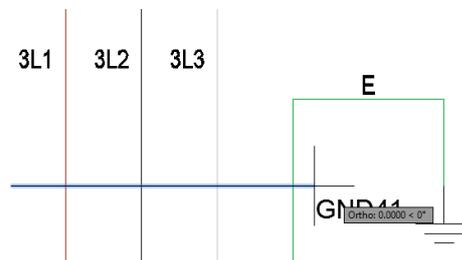

AutoCAD Electrical 2016

If you insert schematic terminals using the Multiple Insert commands, there are now options to hide the tag strip, installation, and location attribute values.

From the *Schematic* ribbon tab > *Insert Components* panel > select  *Multiple Insert (Icon Menu)*

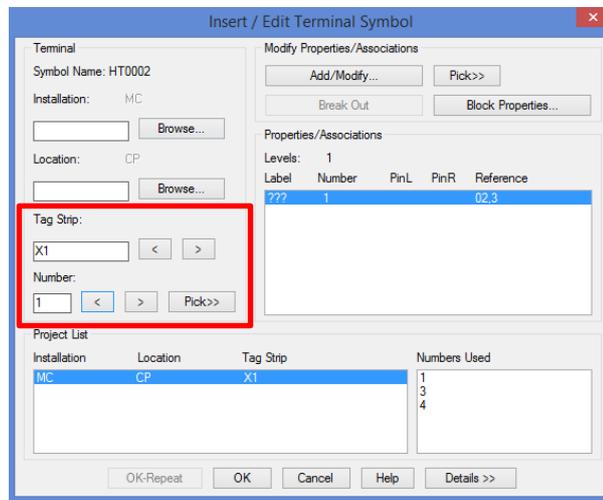

Choose the type of terminal you wish to insert e.g.  *Round with Terminal Number*

Draw your fence line across the wires you wish to insert terminals

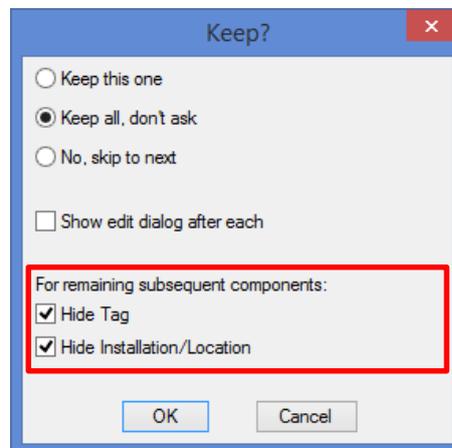

Select *Keep this one* to keep the same symbol type

Select 

Enter the *Tag Strip* value and the terminal *Number* value (if applicable)

Select 

If you wish to maintain the type of symbol, Tag Strip information and the alpha-numerical numbering of the terminals without any changes, select the above options

The new feature is highlighted above

Select
