## **Fixing a Project**

## **AutoCAD Electrical**

When you issue a project for manufacture, you may wish to fix component TAG's, wire numbers and item numbers to avoid the possibility of items being changed inadvertently after build has started or indeed completed.

Of course, if you have installed Autodesk<sup>®</sup> Vault, then you also can roll back to the previous issue or indeed several issues previous and that can negate the requirement of the following *Tips and Tricks*.

$ \square$
غر

Select the Project ribbon tab > Utilities

Project-Wide Utilities		×
Wire Numbers	Signal Arrow Cross-reference text No Change	~
Erase C Remove all wire numbers Keep fixed wire numbers	Parent Component Tags: Fix/Unfix Set all to fixed	~
Reset Reset all wire numbers to "?" Keep fixed wire number values Fix/Unfix Set all wire numbers to fixed Set all using numbers to second	Item Numbers: Fix/Unfix Set all to fixed Change Attribute Change Attribute Size Change Style	Setup Setup
For each drawing Run command script file Purge all blocks		
Wire Types Import from specified drawing OK	Cancel Help	Setup

Ensure the following are selected (dependent upon requirements):

• Set all wire numbers to fixed
---------------------------------

Parent Component Tags: Fix/Unfix	Set all to fixed
Item Numbers: Fix/Unfix	Set all to fixed

You can also Purge all blocks to reduce the file size of the drawings.
